## CONNECTING TO THE SERVER FROM HOME

As you have already seen, adding files to the server is relatively easy while connected to the PSU wifi, but what if you are away from campus? How are you supposed to upload your stuff??? No PSU wifi, no problem! Thanks to a handy tool known as a Virtual Private Network (or VPN for short). The VPN allows us to access the PSU network and servers as though we were hanging out on campus — pretty neat, right?

### WHAT YOU WILL NEED

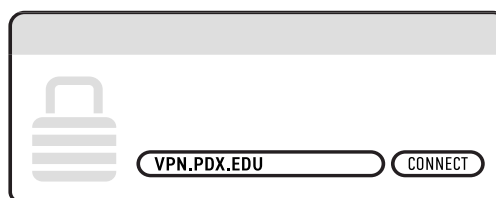

- [Cisco AnyConnect Client](#)
- [Duo Mobile App](#)
- [Cyberduck](#)

### HOW TO CONNECT

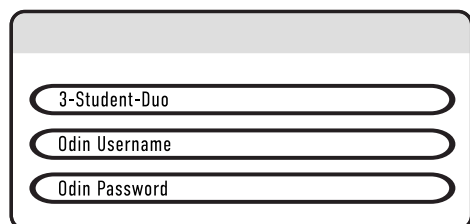

1. Download the Cisco AnyConnect Client onto your computer, and the Duo Mobile app to your phone. After downloading the Duo app, [enroll your device](#).

2. Open the Cisco Client, and type in "vpn.pdx.edu", then press connect.

3. In the group settings select the third option (3-Student-Duo), then enter your Odin username and password.

4. Once you hit okay, you will receive a notification on your phone from the Duo App request for you to approve the connection. Once it has been approved, you can access the server from anywhere!
